

# **Description**

When we think about acoustic treatment we often focus on the midrange and upper frequencies, but a  $proper\ a constict real ment\ requires\ a\ more\ comprehensive\ approach,\ needing\ to\ take\ into\ account$ the problem of low frequencies, particularly when you are in a smaller room. Taking the audiophiles and home theatres owners as examples, we have realised that most complaints come from the sound of bass instruments with a lot of echo that bounces throughout the room, from movie dialog that is difficult to understand at low volumes, or even from excess ambience that turns music into an incoherent confusion. For that reason, Artnovion developed a bass trap specifically for the Pro Audio section. With Petra W HP bass trap you get a premium High Performance acoustic treatment that efficiently corrects low end frequencies and creates various artistic patterns when mounted.
